

## Installation Instructions

## Kit # B3370 & B3370NR

Billet Aluminum Fast Fill Remote Master Cylinder

## Applications:

Funny Cars

### B3370 & B3370NR External Components

Item #	Part #	Qty.	Description
1	B3370A	1	Master Cylinder Body
2	B3362S	2	Banjo Bolt
3	B3362U	4	Aluminum Crush Washer
4	B3362T	2	Banjo Fitting (Outlet Ports)
5	P2365S	1	Front Brakes Reservoir Inlet Fitting
6	B3362Q	1	Rear Brakes Reservoir Inlet Fitting
7	B3362N	1	Inlet Fitting O-Ring
8	B3362HB	1	Bypass Valve Spring
9	Q1000C	1	3/16" Valve Ball
10	B3362HA	1	Bypass Valve
11	B3362I	1	Pushrod Boot
12	B3362C	1	Pushrod

### B3364S Optional Flange Kit

19	B3364L	2	Dowel Pin
20	B3364D	1	Master Cylinder Flange
21	B3364M	1	External Snap Ring

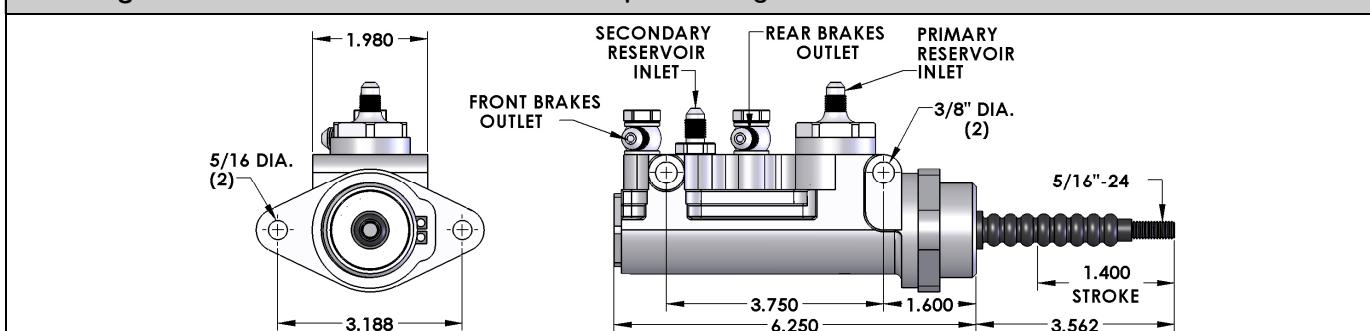

### Plumbing:

- The reservoir, inlet, and outlet ports accept -3 AN fittings
- The outlet port closest to the pushrod should be plumbed to the rear brakes
- The reservoir must be mounted above the level of the master cylinder and as far above the level of the calipers to stop fluid from backing up in the lines and pulling the caliper pistons back in their bores, eliminating the need for residual valves
- Bore dia. for the front brakes is 1-1/8" (Front brake pressure will be half of the rear brake pressure)
- Bore dia. for the rear brakes is 7/8"

### Installation:

- Before installation, the master cylinder **MUST** be bench bled. The majority of soft or spongy brakes results from not bleeding the master cylinder before it is installed. To properly bench bleed the Master:
  - Connect brakes lines from the reservoir to both inlet ports on the master cylinder
  - Run brake lines from both outlet ports (4) to the inside of the reservoir
  - Fill the reservoir with DOT 4 or DOT 5.1 brake fluid until the ends of the lines are covered
  - Slowly cycle the pushrod in and out until the lines are void of air bubbles
- Recommended handle ratio is 10 to 1
- After installation of the master cylinder, the brake system must be bled. Use only DOT 4 or DOT 5.1 brake fluid  
*Note: During the bleeding process the reservoir cap **MUST** be left loose or completely off to let air into the reservoir as the fluid goes down. If the cap is left off, place a rag over the reservoir, as fluid may shoot up from the tank.*

**Mounting Dimensions:** Front view is shown with optional flange kit which can also be clocked at 90°

**WARNING – RACING IS HAZARDOUS · STRANGE BRAKES ARE FOR LEGAL DRAG RACING ONLY**

Disclaimer of Warranty – Purchasers using Strange Engineering racing components and equipment any and all inventory services, purchasers acknowledge that due to differing conditions and circumstances under which all equipment and parts are installed and used, purchasers are not relying on Strange Engineering Co. skill or judgment to select or furnish the proper part or equipment.
